Information for patients taking the medication

.....

The information below is important for you to remember!

In the event of **dehydration**, you should **temporarily stop** taking this medication to avoid side effects.

There is a risk of **dehydration** when fluids are lost through, for example, vomiting, diarrhoea, fever and unusually warm weather.

In such situations, you need to **temporarily stop** taking the medication.

Resume treatment when you have recovered!

If you have any doubts, contact your clinic, health centre or call the medical advice telephone service Sjukvårdsrådgivningen.

Kind regards,

.....
